Profile

Computer Science and Engineering undergraduate (Class of 2027) with hands-on internship experience building and optimizing Node.js and Python backend services, RESTful APIs, and multi-tiered machine learning applications. Strong foundation in data structures, algorithms, object-oriented design, and database query optimization, complemented by AWS cloud training.

Skills

Programming Languages: Python, Java, JavaScript, SQL

CS Fundamentals: Data Structures & Algorithms, Object-Oriented Design (OOD), Operating Systems, Complexity Analysis, DBMS

Backend & APIs: Node.js, Express.js, Flask, RESTful APIs, Microservices Architecture

Databases: MongoDB (Compound Indexing, Aggregation Pipelines), MySQL, PostgreSQL

Frontend Technologies: React.js, HTML5, CSS3, Tailwind CSS

Cloud, AI & Developer Tools: AWS (Cloud Foundations), Scikit-learn, NumPy, Pandas, OpenAI API, Git, GitHub

Experience

Backend Developer Intern (Node.js) — KriBud Web Tech Aug 2025 – Mar 2026

- Designed, developed, and maintained scalable backend services for user authentication, order management, and database operations using Node.js, Express.js, and MongoDB.
- Refactored MongoDB query patterns using compound indexing and aggregation pipelines, reducing API response latency and improving backend workflow efficiency by 35%.
- Structured modular data-access layers and request validation pipelines using Git-based workflows to eliminate redundant database calls under concurrent workloads.

Projects

InsureAI (InsurePred) – Multi-Tier Health Insurance Premium Prediction | *MERN, Python, Flask, Scikit-learn* Live | GitHub

- Architected a full-stack prediction platform integrating a React and Node.js/Express application layer with a decoupled Python Flask machine learning microservice for real-time insurance premium estimation.
- Designed RESTful inter-service communication protocols and payload validation between the Node.js backend and Flask inference engine to maintain low-latency responses.
- Modeled scalable MongoDB schemas and query strategies to store user profiles, prediction inputs, and historical query logs for analytical workloads.
- Validated end-to-end prediction workflows across frontend, backend, and ML inference layers to ensure reliable outputs.

OrderNow – Food Delivery & Grocery Platform | *MongoDB, Express.js, React.js, Node.js, Stripe Connect* GitHub

- Developed a full-stack food and grocery ordering platform supporting product catalog browsing, cart state management, and real-time order lifecycle tracking.
- Integrated the Stripe Connect payment gateway to handle online checkout transactions, payment verification, and order status transitions securely.
- Implemented backend concurrency handling and performed thorough debugging to maintain stable functionality under concurrent user requests.

Education

RVR & JC College of Engineering, Guntur — B.Tech in CSE (AI & ML) | **CGPA: 8.34** 2023 – 2027 (Expected)

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, DBMS, Complexity Analysis

Sri Chaitanya Jr College, Narasaraopet — Intermediate (MPC) | **Percentage: 95%** 2021 – 2023

Certifications

- **Cloud Engineering** — AWS Academy
- **Certified React.JS Developer** — GeeksforGeeks
- **Node.js Complete Course** — GeeksforGeeks
- **Full-Stack Web Development** — Udemy
